## Tema 6 On das electromagneticas

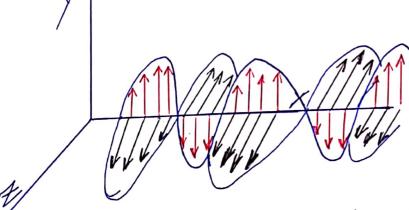

$$l = \frac{\lambda}{T}$$
  $k = \frac{2\pi}{\lambda}$ 

$$V = \frac{\lambda}{T} = \lambda \cdot \hat{V} = \frac{W}{K}$$

$$W = 2\pi \hat{V}$$

## Ondas electromagnéticas armónicas

$$B_{z}(x,t) = B_{o_{z}} \operatorname{sen}(kx - wt) \mathbf{A}$$

$$\int \frac{\lambda}{T} - \lambda J = V = \frac{1}{V \nu E}$$

$$V = \frac{1}{|V|E}$$
Indice de refracción
$$u = \frac{C}{V} = \frac{VuE}{|V|_{0} E_{o}} = \sqrt{|V|_{0} E_{r}} \approx E_{r}$$

## Energia transportada per una onda

$$\left[U_{E} = \frac{1}{2} \mathcal{E}_{o} E^{2}\right]$$

$$E_o = V.B_o$$

$$\left[ \mathcal{U}_{B} = \frac{1}{2 \, \text{No}} \, \mathcal{B}^{2} \right]$$

$$\left[\mathcal{M}_{T} = \mathcal{E}_{o} E^{2} = \frac{\mathcal{B}^{2}}{\mathcal{N}_{o}}\right]$$

Densidad de energia de una onda electromagnetica.

Aire v(c) = 3.108 $J = 1.5.10^{6} H_{2}$  Medio  $n_2 = 1.5$   $V_2 = ?$   $\lambda_2 = ?$  $J = 1.5 \cdot 10 \, H_2$ 

Teoría: Una onda electromagnetica al combiar de medio varia su velocidad de propagación y su longitud de cnela (1) pero su representante. Así pues de anela (1) pero su redio 2.

$$3.10^{8} = \lambda.$$
 1,5.106  
 $\lambda_{1} = 200 \text{ m}$ 

$$n = \frac{C}{V} = D \quad n_2 = \frac{C}{V_2}$$

$$1_1 S = \frac{3 \cdot 108}{V_2}$$

$$V_2 = \frac{3 \cdot 108}{I_1 S} = 2 \cdot 108 \text{ m/S}$$

$$V_2 = \lambda_2 \cdot 1_1 S \cdot 10^6 = D \quad \lambda_2 = \frac{2 \cdot 10^8}{I_1 S \cdot 10^6} = \frac{2 \cdot 10^8}{133,3 \text{ m}}$$

$$\dot{E}_{x}=0 \qquad E_{y}=30 \text{ sen } \left[\frac{5\pi}{5\pi}\left(\frac{5004}{4007}\right)\right] \quad E_{z}=0$$

$$a) > 1 \quad T \quad y \quad \text{Juse inicial}$$

$$V = 2TT$$

$$V = \frac{W}{2TT} = \frac{2TT}{2TT} = 5.10^{4} Hz$$

$$T = \frac{1}{2} = \frac{1}{5.10^{4}} = 2.10^{-15} \text{ segunds}$$

$$\lambda = vT \Rightarrow v = \frac{1}{1} + \frac{4.10^{-7}}{2.10^{-15}} = \frac{0.02}{10^{-2}} =$$

$$\lambda = V = \frac{2TT}{k} = \frac{2TT}{4.10^{-7}} = \frac{2TT}{4.10^{-7}} = \frac{2TT}{4.10^{-7}}$$

$$o \ N_{\text{medio}} = \frac{C}{V} = \frac{3 \cdot 10^8}{2 \cdot 10^8} \Rightarrow n = 1.5$$

$$\frac{\lambda_0 = \frac{3.10^8}{5.10^{14}} = 6.10^{-7} \text{ m}}{5.10^{14}} = 6.10^{-7} \text{ m}$$

c) Escribir la expresión de Basociado con el Ede la onda 2 electromagnética unel vario.

$$E_0 = cB_0 \Rightarrow B_0 = \frac{E_0}{c} = \frac{30}{3 \cdot 10^8} = 10^{-7} \text{ T}$$

$$\overline{B}^{2} = \begin{cases} B_{x} = 0 \\ B_{y} = 0 \end{cases}$$

$$B_{z} = 10^{-7} \text{ sen} \left[ 2\pi i \left( 5 \cdot 10^{44} + \frac{1}{4 \cdot 10^{-7}} \times \right) \right]$$
